For Immediate Release:

GoldFax invites Castelle FaxPress users to reduce support costs by 50% with GoldFax Cloud

Irvine, CA (July 11, 2012) DPD International, the makers of GoldFax, today invited current Castelle FaxPress users to cut their existing annual maintenance costs by at least 50% with GoldFax Cloud. Partnering with the etherFAX technology, GoldFax Cloud offers organizations an innovative and secure way to manage fax communication while reducing their total cost and eliminating issues with managing their fax infrastructure.

"We are consistently hearing of customers unsatisfied and frustrated with outdated fax servers, telecommunication headaches and expensive support contracts with their existing fax server" said Bill Vanek, Director of Sales for GoldFax. "Every organization is looking for ways to reduce costs, increase productivity and improve operational efficiency. The GoldFax Cloud solution will easily resolve many of the frustrations and concerns that are exhausting resources and putting organizations over budget."

GoldFax Cloud offers organizations the ability to "cloud-enable" their fax telephony infrastructure, removing the need for on premise fax telephone lines and fax server telephony connectivity. All that is needed is Internet access. Faxes are secure and never stored outside of an organization or their control – they are processed and stored on premise on the organizations GoldFax server. Users control access and can track all faxes with a complete audit trail and archive capability enabling users to reproduce all faxed documents for security and compliance reasons to meet industry regulations. Some of the main benefits include:

- A "software only" fax solution – no local fax telephone lines, just Internet connection
- Lower cost, easier to install and maintain than conventional fax servers
- Cloud based fax telephone service connectivity
- Encrypted and secure fax transactions – HTTPS
- More secure than a "hosted fax service"
- Removes hassle and cost of managing fax telephone integration infrastructure

"We understand the changing needs of organizations and want to continue to offer solutions that help in improving efficiency while still meeting compliancy and security expectations," said Bill Vanek. "In leveraging the GoldFax functionality with the etherFAX technology, GoldFax Cloud users will still experience a fast, intuitive, and efficient fax solution without having to manage heavy support contracts and hardware costs."

GoldFax Cloud supports virtualization and is scalable for any size organization across any industry. Users get to keep their existing fax numbers, making the transition and integration seamless and easy. As an extra bonus, the porting of current Castelle FaxPress users' fax numbers will be at no additional cost.

"etherFAX is changing how faxes are typically sent and received," said Quinn Corey, Director of Sales for etherFAX. "Its patent-pending technology leverages the Internet instead of PSTN networks to manage incoming and outgoing fax communications. Extending existing fax servers such as GoldFax to the cloud, etherFAX removes the need for costly components such as fax boards, media gateways, and FoIP drivers. It also eliminates recurring telephony expenses. Through its infrastructure as a service (IaaS) model, etherFAX hosts a vast array of virtual ports, making them available to send and receive high volumes of fax transmissions."
