- No MFP Fax Hardware required
- No on-site fax telephone lines or service required
- Easy to install - No server software, no telephone system integration. All you need is Internet access.
- Set up via the Sharp MFP Web Administrator interface
- Secure fax transactions - HTTPS

How Does It Work?

eGoldFax Cloud Faxing for Sharp OSA 4.0 Cloud Connected MFPs is easy to set up. No software to download or install. GoldFax Cloud Fax Telephone Service is set up via the Sharp MFP Web Administrator interface. It is configured to transmit your faxes to the GoldFax Cloud Fax Telephone Service via a secure HTTPS Internet connection. You are operational in 5 minutes. Press the eGoldFax button on the Sharp touch panel, provide a fax number, and scan and fax. *It's that easy!*

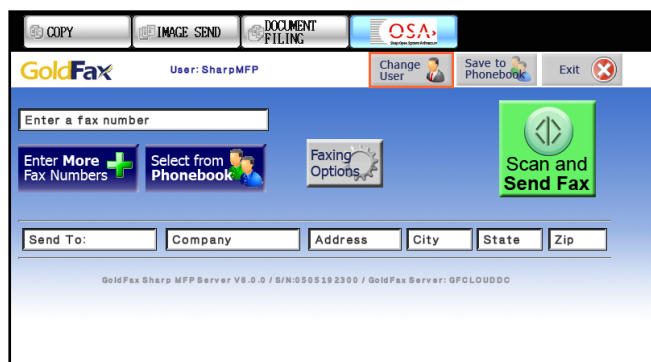

Requires Sharp OSA 4.0 Cloud Connected MFPs (MX-AMX2), Internet access, and a unique company email domain name for “Fax from Email”.

Outbound Faxing

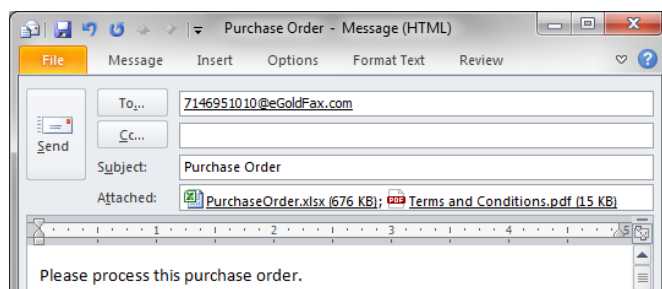

You can scan and fax paper documents from your eGoldFax integrated Sharp OSA 4.0 Cloud Connected MFPs. Select eGoldFax from the MFP Touch Panel.

Enter a fax number. Create GoldFax Phonebooks on the MFP to store frequently faxed numbers. Enter your email address to receive an email notice of fax status. The scanned document image is transmitted via secure HTTPS to the GoldFax Cloud Fax Telephone Service for processing. Upon completion of the fax, a confirmation email is sent to the sender of the fax.

To fax from your computer or smart device, simply address an email message using "Fax Number@eGoldFax.com" format. Provide the fax number and enter the subject and message text for the fax cover sheet. Attach the document(s) you want to fax and send the email. The GoldFax Cloud Fax Telephone Service sends the fax. Requires a unique company email domain name. Domain names are simply the words following the @ symbol in your email address. Email addresses ending with @gmail.com, @yahoo.com, @aol.com, etc. will not work.

Inbound Faxing

You are provided with Direct Inward Dial (DID) Toll Free fax #s. Each inbound fax is routed to you via email as a message with a PDF fax attachment. You can obtain additional DID fax numbers (Toll and Toll Free). Use DID fax numbers to route received faxes to specific email addresses. Use DID fax #s for key users, departments, or business processes. Keep your fax #s - port to Cloud Fax Tel Service (Save \$30/mo. per Analog POTS fax line eliminated). **No fax busy, never miss an inbound fax**

GoldFax Cloud Security

eGoldFax Cloud Faxing provides a secure and encrypted communication channel using Hypertext Transfer Protocol Secure (HTTPS) and SSL between your Sharp OSA-enabled MFPs and the GoldFax Cloud Fax Telephone Service.

eGoldFax Cloud Faxing for Sharp OSA MFPs vs. Traditional Fax Server – Easier, Lower Cost

Traditional fax server solutions required installing a fax server on-site and fax hardware/software connected to on-site telephone service for sending/receiving faxes. This included Analog and Digital T1/PRI fax hardware (fax boards or fax gateways/appliances) and/or Fax over IP software. Usually a connection was made through your on-site telephone system for Direct Inward Dial fax routing. This usually involved your telephone system integrator. With eGoldFax Cloud Faxing for Sharp OSA MFPs, you do not need to purchase or install any on-site fax server software/hardware, nor deal with the complexities of integration with your telephone system.

GoldFax, a Waterford Technologies Company, has been developing office and network software for 30 years. Industry leading organizations worldwide have selected GoldFax for their critical fax document delivery solutions - including small, medium, and Fortune 1000 companies, government, and universities with over 1,000,000 end-users.
